

INTRODUCTORY
MATHEMATICAL ECONOMICS

Second Edition

D. Wade Hands

University of Puget Sound

New York Oxford
OXFORD UNIVERSITY PRESS

CONTENTS

<i>Preface</i>	xiii
<i>Mathematical Notation</i>	xv
<i>Mathematical Symbols</i>	xv
<i>The Greek Alphabet</i>	xvii

Chapter 0 Review of Mathematics 1

0.1	Some Basic Mathematical Concepts	1
	Sets	1
	Functions and Related Topics	3
	Functions	3
	Limits and Continuity	3
	Exponential and Logarithmic Functions	3
	Probability Theory	4
0.2	Calculus	5
	Calculus of One Variable	5
	The Derivative	5
	Some Rules of Differentiation	5
	Higher-Order Derivatives	6
	Taylor Series	6
	Maxima and Minima	6
	Integration	8
	The Indefinite Integral	8
	Some Rules for Integration	8
	The Definite Integral	8
	The First Fundamental Theorem of Calculus	9
	The Second Fundamental Theorem of Calculus	9
	Differential Equations	9

	Multivariate Calculus	10
	Partial Derivatives	10
	The Total Differential	10
0.3	Matrices and Related Topics	11
	Matrices	11
	Matrix Operations	12
	Addition	12
	Scalar Multiplication	13
	Matrix Multiplication	13
	The Transpose of a Matrix	14
	Determinants	15
	The Determinant of a Matrix	15
	Properties of Determinants	16
	The Identity Matrix	16
	The Inverse of a Matrix	16
Chapter 1	Economic Applications of One-Variable Calculus	18
1.1	Applications of One-Variable Calculus from Introductory Economics	19
	Demand and Marginal Revenue	19
	Elasticity	24
	Cost Functions	29
	Income–Expenditure (Keynesian) Multipliers	32
1.2	Optimization Examples from Introductory Economics	33
	Profit-Maximizing Output: Perfect Competition	33
	Profit-Maximizing Output: Monopoly	37
	Consumer Choice	38
1.3	Introduction to Concavity and Convexity	43
	Concave and Convex Functions	43
	Concavity and Convexity in Economics	47
	<i>Problems</i>	51
	<i>Notes</i>	55
Chapter 2	Economic Applications of Multivariate Calculus	57
2.1	Partial Derivatives and the Total Differential in Economics	57
	Consumer Choice Theory	57
	Production Theory	68
	The Equation of Exchange in Macroeconomics	73
2.2	Homogeneous Functions	76
	The Mathematics of Homogeneous Functions	76
	Homogeneity and Production Theory	78
	Homogeneity and Demand Theory	80

- 2.3 Homothetic Functions 82
- 2.4 Concave Functions in n Variables 84
 - Problems* 86
 - Notes* 89

Chapter 3 Comparative Statics I: One and Two Variables with and without Optimization 91

- 3.1 Equilibrium Comparative Statics in One and Two Dimensions 96
 - Supply and Demand 93
 - The *IS-LM* Model 96
- 3.2 Comparative Statics with Optimization in One and Two Dimensions 101
 - Perfectly Competitive Firm 1 101
 - First- and Second-Order Conditions for Two-Variable Optimization 106
 - Perfectly Competitive Firm 2 109
- 3.3 Comparative Statics with Both Equilibrium and Optimization 115
 - The Cournot Duopoly Model 115
 - Comparative Statics in the Cournot Model 119
 - Problems* 124
 - Notes* 130

Chapter 4 Integration, Time, and Uncertainty in Economics 131

- 4.1 Integration 131
 - Integration in Cost Theory 132
 - Consumer's and Producer's Surplus 135
 - Surplus and Public Goods 139
- 4.2 Time 142
 - Discounting and Present Value in Discrete Time 143
 - Bond Prices and Interest Rates 145
 - Internal-Rate-of-Return Criterion for Investment Decisions 147
 - Discounting and Present Value in Continuous Time 148
 - The Optimal Time to Cut a Tree 152
- 4.3 Uncertainty 154
 - Introduction to the Economics of Uncertainty 154
 - Insurance 160
 - Problems* 166
 - Notes* 170

Chapter 5 Introduction to Continuous Time Dynamics in One and Two Dimensions 171

- 5.1 Single-Market Competitive Equilibrium 173
 - A Diagrammatic Approach 173
 - A More Formal Approach to Single-Market Stability 175
 - Local Versus Global Stability 178
- 5.2 Examples of One-Variable Dynamic Economic Models 180
 - The Solow Neoclassical Growth Model 180
 - Inflationary Dynamics 186
- 5.3 Multiple-Market Competitive Equilibrium 188
 - A Three-Good General Equilibrium Model 188
 - The Phase Diagram Technique 192
 - Stability in the Three-Good Gross Substitute Case 198
- 5.4 A Macroeconomic Example 200
 - Dynamics in the *IS-LM* Model 200
 - Stability of the *IS-LM* Model 201
- 5.5 An Alternative Notion of Stability 204
 - Saddle-Point Stability 204
 - A Monetary Growth Model 205
- Problems* 210
- Notes* 214

Chapter 6 Matrices and Economic Theory 216

- 6.1 Submatrices and Minors 216
- 6.2 Cramer's Rule in Economics 218
 - Cramer's Rule 219
 - An Application: The Perfectly Competitive Firm 220
- 6.3 Inverse- and Implicit-Function Theorems 223
 - Inverse-Function Theorem and Economics 223
 - Implicit-Function Theorem and Economics 228
- 6.4 A Special Class of Matrices: *M* Matrices 231
- 6.5 The Leontief Input–Output System 233
- 6.6 Quadratic Forms and Definiteness 238
 - Problems* 245
 - Notes* 248

Chapter 7 Comparative Statics II: n Variables with and without Optimization 249

- 7.1 Equilibrium Comparative Statics in n Dimensions 249
 - Comparative Statics in the Leontief System 249
 - Comparative Statics in the n -Good General Equilibrium Model 253

	The Gross Substitute System	255
7.2	Comparative Statics with Optimization in n Dimensions	259
	First- and Second-Order Conditions for n -Variable Optimization Problems	259
	Perfectly Competitive Firm with n Inputs	262
	Comparative Statics of Factor Demands	262
	The Supply Function and the Profit Function	267
	The Envelope Theorem	269
	<i>Problems</i>	271
	<i>Notes</i>	274

Chapter 8 Comparative Statics III: Optimization under Constraint 275

8.1	The Lagrange Technique: First- and Second-Order Conditions	275
	First-Order Conditions	275
	Interpretation of Lagrangian Multipliers	277
	The Envelope Theorem for Constrained Optimization Problems	279
	Second-Order Conditions	282
8.2	A Specific Utility Function	285
8.3	Choice between Labor and Leisure	289
8.4	Comparative Statics from Constrained Optimization: Two Approaches	294
8.5	Consumer Choice: The n -Good Case	297
	The General Utility Maximization Problem: Consumer Demands	297
	The Expenditure Minimization Problem: Compensated Demands	302
	The Slutsky Relation	306
8.6	Additively Separable Utility Functions	313
	<i>Problems</i>	316
	<i>Notes</i>	324

Chapter 9 Inequality Constraints in Optimization Theory 325

9.1	A Simple Inequality Constraint	326
9.2	The General Kuhn–Tucker Theorem	328
9.3	Economic Examples of Kuhn–Tucker Theory	336
	Consumer Choice with Inequality Constraints	336
	Monopoly Behavior under Rate-of-Return Regulation	338

9.4	Linear Programming	342
	Introduction	342
	The Dual Problem	346
	The Ricardian Model of International Trade	351
	<i>Problems</i>	353
	<i>Notes</i>	358
	<i>References</i>	359
	<i>Appendix: Answers to Selected Problems</i>	361
	<i>Index</i>	371
