

Maths for Economics

Geoff Renshaw

with contributions from Norman Ireland

OXFORD
UNIVERSITY PRESS

Short contents

About the author	xxi
About the book	xxiii
Guided tour for text book features	xxvi
Guided tour of Companion Web Site	xxviii
Acknowledgements	xxx

Part One Foundations

1 Arithmetic	5
2 Algebra	51
3 Linear equations	73
4 Quadratic equations	131
5 Some further equations and techniques	165

Part Two Optimisation with one independent variable

6 Derivatives and differentiation	207
7 Derivatives in action	233
8 Economic applications of functions and derivatives	271
9 Elasticity	321

Part Three Mathematics of finance and growth

10 Compound growth and present discounted value	371
11 The exponential function and logarithms	407
12 Continuous growth and the natural exponential function	429
13 Derivatives of exponential and logarithmic functions and their applications	463

Part Four Optimisation with two or more independent variables

14 Functions of two or more independent variables	487
15 Maximum and minimum values, the total differential and applications	541

viii SHORT CONTENTS

16	Constrained maximum and minimum values	585
17	Returns to scale and homogeneous functions; partial elasticities; logarithmic scales; growth accounting	627

Part Five **Some further topics**

18	Integration	669
19	Matrix algebra	701
20	Difference and differential equations	721
21	Extensions and future directions	749
	<i>Solutions to progress exercises</i>	809
	<i>Glossary</i>	855
	<i>Index</i>	865
