

**A GUIDE TO
ECONOMETRICS
FIFTH EDITION**

PETER KENNEDY

**The MIT Press
Cambridge, Massachusetts**

CONTENTS

<i>Preface</i>	xi
<i>Dedication</i>	xv
1 Introduction	1
1.1 What is Econometrics?	1
1.2 The Disturbance Term	3
1.3 Estimates and Estimators	4
1.4 Good and Preferred Estimators	5
General Notes	6
Technical Notes	10
2 Criteria for Estimators	11
2.1 Introduction	11
2.2 Computational Cost	11
2.3 Least Squares	12
2.4 Highest R^2	14
2.5 Unbiasedness	15
2.6 Efficiency	17
2.7 Mean Square Error (MSE)	18
2.8 Asymptotic Properties	19
2.9 Maximum Likelihood	23
2.10 Monte Carlo Studies	24
2.11 Adding Up	27
General Notes	28
Technical Notes	37
3 The Classical Linear Regression Model	47
3.1 Textbooks as Catalogs	47
3.2 The Five Assumptions	48
3.3 The OLS Estimator in the CLR Model	49

General Notes	52
Technical Notes	56
4 Interval Estimation and Hypothesis Testing	60
4.1 Introduction	60
4.2 Testing a Single Hypothesis: the t Test	60
4.3 Testing a Joint Hypothesis: the F Test	61
4.4 Interval Estimation for a Parameter Vector	63
4.5 LR, W, and LM Statistics	66
4.6 Bootstrapping	68
General Notes	70
Technical Notes	77
5 Specification	81
5.1 Introduction	81
5.2 Three Methodologies	82
5.3 General Principles for Specification	85
5.4 Misspecification Tests/Diagnostics	86
5.5 R^2 Again	90
General Notes	92
Technical Notes	103
6 Violating Assumption One: Wrong Regressors, Nonlinearities, and Parameter Inconstancy	107
6.1 Introduction	107
6.2 Incorrect Set of Independent Variables	107
6.3 Nonlinearity	109
6.4 Changing Parameter Values	112
General Notes	114
Technical Notes	123
7 Violating Assumption Two: Nonzero Expected Disturbance	129
General Notes	131
8 Violating Assumption Three: Nonspherical Disturbances	133
8.1 Introduction	133
8.2 Consequences of Violation	134
8.3 Heteroskedasticity	136
8.4 Autocorrelated Disturbances	139
General Notes	144
Technical Notes	151

9	Violating Assumption Four: Measurement Errors and Autoregression	157
9.1	Introduction	157
9.2	Instrumental Variable Estimation	159
9.3	Errors in Variables	160
9.4	Autoregression	163
	General Notes	166
	Technical Notes	172
10	Violating Assumption Four: Simultaneous Equations	180
10.1	Introduction	180
10.2	Identification	182
10.3	Single-equation Methods	186
10.4	Systems Methods	190
	General Notes	191
	Technical Notes	197
11	Violating Assumption Five: Multicollinearity	205
11.1	Introduction	205
11.2	Consequences	206
11.3	Detecting Multicollinearity	208
11.4	What to Do	210
	General Notes	212
	Technical Notes	217
12	Incorporating Extraneous Information	218
12.1	Introduction	218
12.2	Exact Restrictions	218
12.3	Stochastic Restrictions	219
12.4	Pre-test Estimators	219
12.5	Extraneous Information and MSE	221
	General Notes	223
	Technical Notes	228
13	The Bayesian Approach	230
13.1	Introduction	230
13.2	What Is a Bayesian Analysis?	230
13.3	Advantages of the Bayesian Approach	234
13.4	Overcoming Practitioners' Complaints	235
	General Notes	238
	Technical Notes	243

14 Dummy Variables	248
14.1 Introduction	248
14.2 Interpretation	249
14.3 Adding Another Qualitative Variable	250
14.4 Interacting with Quantitative Variables	252
14.5 Observation-specific Dummies	253
General Notes	254
Technical Notes	257
15 Qualitative Dependent Variables	259
15.1 Dichotomous Dependent Variables	259
15.2 Polychotomous Dependent Variables	262
15.3 Ordered Logit/Probit	263
15.4 Count Data	263
General Notes	264
Technical Notes	272
16 Limited Dependent Variables	281
16.1 Introduction	281
16.2 The Tobit Model	283
16.3 Sample Selection	284
16.4 Duration Models	287
General Notes	289
Technical Notes	294
17 Panel Data	301
17.1 Introduction	301
17.2 Allowing for Different Intercepts	303
17.3 Fixed versus Random Effects	305
17.4 Short Run versus Long Run	307
17.5 Long, Narrow Panels	308
General Notes	309
Technical Notes	315
18 Time Series Econometrics	319
18.1 Introduction	319
18.2 ARIMA Models	320
18.3 VARs	321
18.4 Error-correction Models	323
18.5 Testing for Unit Roots	325
18.6 Cointegration	326
General Notes	328
Technical Notes	340

19 Forecasting	358
19.1 Introduction	358
19.2 Causal Forecasting/Econometric Models	359
19.3 Time Series Analysis	360
19.4 Forecasting Accuracy	361
General Notes	363
Technical Notes	370
20 Robust Estimation	372
20.1 Introduction	372
20.2 Outliers and Influential Observations	373
20.3 Robust Estimators	374
20.4 Non-parametric Estimation	376
General Notes	378
Technical Notes	382
21 Applied Econometrics	389
21.1 Introduction	389
21.2 The Ten Commandments of Applied Econometrics	390
21.3 Getting the Wrong Sign	397
21.4 Common Mistakes	402
21.5 What Do Practitioners Need to Know?	404
General Notes	405
Technical Notes	416
Appendix A: Sampling Distributions, the Foundation of Statistics	418
Appendix B: All about Variance	423
Appendix C: A Primer on Asymptotics	429
Appendix D: Exercises	436
Appendix E: Answers to Even-numbered Questions	516
Glossary	544
Bibliography	550
Name Index	601
Subject Index	610
